

IMPORTANT INFORMATION FOR RESIDENTS ABOUT YOUR SANITARY PIPES!

What do you know about the lift station in your area? Here are some facts you need to know...

A sewage/lift pump is used for pumping wastewater or sewage from a lower to higher elevation.

The lift station is a critical part of the sewage and drainage systems which keep Carstairs plumbing and sewage disposal systems continually working. If the sewage pump fails, it can result in sewer backups and potentially damage the pumps. The work to remove the debris is time consuming, hazardous, and not to mention, costly.

DID YOU KNOW...?

Products advertised as '**disposable**' or '**flushable**' or '**biodegradable**' do not break down in water, and while they may be biodegradable, it can take years for these materials to decompose.

Keep wipes out

of the pipes!

Kleenex, paper towels, and wipes do not deteriorate – they tear causing waste forms into threadlike mats or ropes that get tangled in pumping and lift station systems. To avoid any problems, **toilet paper** is the **ONLY** safe product you should flush down pipes.

PLEASE HELP KEEP OUR SYSTEMS CLEAN
